

Trusted by Hospitals, Wound Care Clinics, Physicians, Home Health Professionals and Patients

“A patient who had a tape sensitivity was using an abdominal binder to secure a large dressing over a dehisced abdominal incision and found the binder very uncomfortable. We replaced the binder with DermaHug. The dressings were secured with no skin reaction and the patient was much more comfortable.”

Jan C. FNP-C, CWOCN, CFCN,
Minnesota

“DermaHug has worked great for my sister. Her Ostomy nurse is looking into purchasing it. They have many bariatric patients that she feels your product would help. Thank you, thank you, thank you.”

Frances S. RN
Louisiana

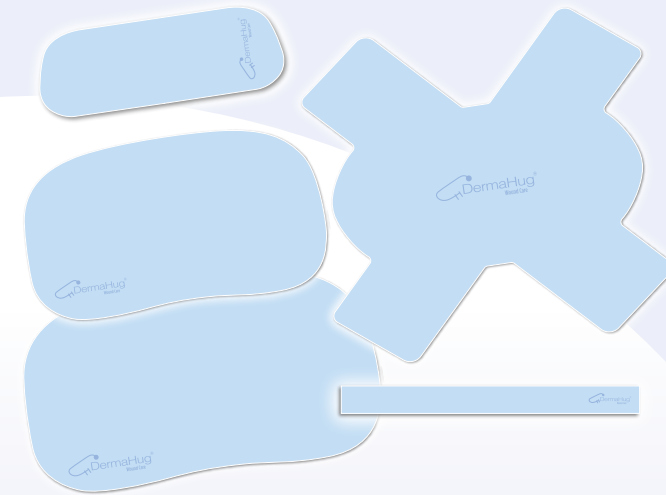

“The DermaHug has significantly improved outcomes with some of my more complex patients... and the added compression significantly decreased their wound healing time.”

Raechel B. PA-C MPH
Minnesota

Benefits:

- Easy to use. Just remove backing & apply. That's it!
- Seals wound from moisture
- Can be worn in the shower
- Potentially reduces pain
- Reduces shear forces acting on the wound
- Stabilizes and protects newly healed wounds
- Decreased incidence of dehiscence
- Will not harm the dermis
- Can be trimmed to fit custom applications
- Silicone tackiness does not cause contact sensitivity reaction or skin stripping
- Cost effective
- Keeps dressing in place WITHOUT tape
- Adjustable, can be removed & reapplied for wound care & dressing changes
- Durable, can be worn up to 2 weeks or more
- Easily forms to patients' contours
- Easily cleans with soap/warm water, air dry, reapply
- **Consistent high patient satisfaction**
- Less time to change dressings/reapply
- Normalizes patient for day to day activities vs. tape

One product to safely secure all your dressings without tape

Vasculitis

Chemo Access Port

Transverse Abdominal Incision

"The DermaHug was easy to use and the patient was surprised at how comfortable it was."

Terri W. RN BSN
Louisiana

Supporting Incision
at Risk of Further Dehiscence

Various Sizes:

- R-514 (5"x14")
- LB-1516 (15"x16")
- O-1018 (10"x18")
- T-3536 (3½"x36")

Pilonidal Incision

Midline Abdominal Incision

"We have used the DermaHug on patients who have had large pilonidal excisions and APR incisions. Whether a dressing was needed or not, the patients universally appreciated the dramatic increase in comfort when the buttocks were held together. They could sit & walk more comfortably throughout the healing process."
